

WHAT IS CLAIMED IS:

1. A dusting brush, comprising a brush holder, a sliding sleeve slidably mounted on the brush holder, two symmetrical ornament shells mounted on the sliding sleeve to move therewith, and a plurality of bristles mounted on the brush holder, wherein:

the brush holder has a first end having an outer wall formed with two radially opposite locking bosses and a second end formed with an enlarged seat portion;

the sliding sleeve has an inner wall formed with two radially opposite slideways for slidably mounting the two locking bosses of the brush holder, each of the two slideways of the sliding sleeve has a bottom formed with a locking cavity for snapping and positioning a respective one of the two locking bosses of the brush holder;

the two ornament shells are combined with each other to surround the outer wall of the sliding sleeve; and

the bristles are protruded outward from the first end of the brush holder.

2. The dusting brush in accordance with claim 1, wherein each of the two locking bosses of the brush holder is wedge-shaped.

3. The dusting brush in accordance with claim 1, wherein the seat portion of the brush holder has a bottom formed with a flat face.

1 4. The dusting brush in accordance with claim 1, wherein the locking
2 cavity of each of the two slideways of the sliding sleeve is wedge-shaped.

3 5. The dusting brush in accordance with claim 1, wherein a first one
4 of the two ornament shells is formed with two insertion holes and a second one
5 of the two ornament shells is formed with two insertion pins each inserted into
6 a respective one of the two insertion holes, so that the two ornament shells are
7 combined with each other.

8 6. The dusting brush in accordance with claim 1, wherein the sliding
9 sleeve is slidable on the brush holder to a position where each of the two
10 locking bosses of the brush holder is snapped into and locked in the locking
11 cavity of a respective one of the two slideways of the sliding sleeve, and a
12 lower end of the sliding sleeve is fixed on the first end of the brush holder, so
13 that the bristles are retracted into the sliding sleeve.

14 7. The dusting brush in accordance with claim 1, wherein the seat
15 portion of the brush holder is formed with a tapered urging face, the sliding
16 sleeve is slidable on the brush holder to a position where each of the two
17 locking bosses of the brush holder is detached from the respective locking
18 cavity of the sliding sleeve and rested on the upper end of the sliding sleeve,
19 and a lower end of the sliding sleeve is urged on the urging face of the seat
20 portion of the brush holder, so that the bristles are protruded outward from the
21 sliding sleeve.

1 8. The dusting brush in accordance with claim 1, further comprising
2 an incoming call display mounted in the ornament shell.

3 9. The dusting brush in accordance with claim 1, further comprising
4 an incoming call display mounted in the seat portion of the brush holder.
